***Examiner's Statement of Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: The art of record considered as a whole alone or in combination neither anticipates nor renders obvious, a wrench for engaging an internal surface of a pipe and turning the pipe in either direction, comprising: a shaft that rotates around a center axis, the shaft having at least two cam driving surfaces that are spaced substantially equally from the center axis for transmitting torque applied to the shaft; at least two gripping shells having external convex gripping surfaces disposed on the gripping shells to slidably engage the cylindrically shaped concave internal surface of the pipe at a location on the cylindrically shaped concave internal surface of the pipe that is beyond a threaded portion of the pipe to prevent ovaling of the pipe, the gripping shells further including internal cam follower surfaces that are designed to be engaged by at least two cam driving surfaces on the shaft so that the torque applied to the shaft is transmitted to the at least two gripping shells from the center axis in a direction that is substantially transverse to the center axis so that the gripping shells apply force to the cylindrically shaped concave internal surface of the pipe and the center axis of the shaft is substantially aligned with the center axis of the pipe; and a retainer that engages the gripping shells on the wrench adjacent the shaft and allows the shells to freely move, without being biased, in a direction that is transverse to the center axis to automatically open and engage the internal surface of the pipe, together in combination with the rest of the limitations set forth in the independent claims.
